EDUCATION

Dronacharya College of Engineering

B.Tech in Computer Science

Gurugram, Haryana

Expected 2026

TECHNICAL SKILLS

Programming: Python, JavaScript, C, C++

ML & GenAI: Transformers, RAG, embeddings, LLM fine-tuning (QLoRA – basic), sentiment analysis, computer vision (basics)

Frameworks & Development: TensorFlow, PyTorch, Rasa, FastAPI, Flask, REST APIs, microservices

Libraries: Pandas, NumPy, OpenCV, basic vector DB concepts

Databases: SQL, SQLite, MongoDB (basics)

Tools & Platforms: Docker, Git, Linux, VS Code, Cursor, Google Colab, Sheets/Docs, Figma (flows), Zapier, Make, n8n, agentic workflows

EXPERIENCE

AI/ML Intern

Jul 2025 – Aug 2025

Black Box Limited

- Built a conversational retail assistant using Rasa + FastAPI by mapping internal user use-cases to AI-driven flows
- Integrated Llama 3.2 via Ollama reducing manual support responses by ~30% using summarization pipelines
- Fine-tuned Gemma-1B improving intent recognition accuracy from 74% → 82% on retail utterance dataset
- Collaborated with internal teams to gather feedback and support demo-ready AI workflows

Frontend Development Intern

Nov 2024 – Jan 2025

Medecro Technologies Pvt Ltd

- Developed scheduling and inventory dashboards improving operational visibility
- Integrated backend data streams to surface insights and reduce coordination overhead

Machine Learning Intern

Jun 2024 – Jul 2024

Z Plus Surveillance Security Pvt Ltd

- Built ML pipelines for surveillance feeds processing ~300 frames/min with automated evaluation scripts
- Optimized inference improving real-time monitoring performance by ~15% via batch tuning and quantization

PROJECTS

Clothing and Retail AI Assistant | *Python, Rasa, FastAPI, SQLite, Docker*

Internship

- Enabled product discovery, order tracking, and recommendations for internal users during beta testing
- Llama 3.2 summarization reduced manual catalog checks by ~25%
- Documented use-cases and limitations to support internal demos and feature planning

Real-Time Blur and Motion Detection | *OpenCV, TensorFlow, Flask*

2024

- Reduced false alerts by ~15% using blur thresholding and motion heuristics
- Maintained ~45ms/frame latency enabling near real-time processing

Automated YouTube Shorts Pipeline | *n8n, APIs, GenAI, automation*

Side Project

- Designed an end-to-end agentic automation workflow to generate and publish YouTube Shorts without manual intervention
- Implemented Reddit ingestion, content filtering, ranking, batching, and scheduled execution using n8n code and control nodes
- Integrated Groq-hosted LLaMA 3.3 (70B) to convert long-form Reddit stories into short-form narration scripts
- Coordinated local Python video generation, metadata logging via Google Sheets, and automated uploads to YouTube

ACHIEVEMENTS & CERTIFICATIONS

AIR 18 – NCAT 2023 | Finalist – Medecro HealthHack 2024

MongoDB Python Developer (2024) | NPTEL Python Programming

Leadership: Led team during AI bootcamp project, coordinating solution design, execution, and final presentation
